

2024 PERFORMANCE EYEWEAR

Europe | Middle East | Africa

PIONEERS IN PROTECTIVE EYEWEAR

Wiley X is a global leader in the protective eyewear market, and we supply both military forces and law enforcement personnel with top of the line protective and ballistic eyewear.

We are pioneers in protective eyewear. However, as pioneers, we also experienced a great need and demand for high quality sunglasses that can be worn with confidence outside the battlefield.

We recognize that today's lifestyle poses constant threats to our eyes' health, and that is why we have created some of the most innovative, functional, performance ready, and color enhancing sunglasses in the world.

PROTECTION

- Injection molded thermoplastic knuckle and individual finger protectors for superior impact and abrasion resistance
- Ergonomically shaped palm with synthetic leather for maximum durability and breathability
- Reinforced thumb on high-wear areas
- Moisture wicking heavy-duty lycra gussets for increased breathability
- Ventilated fingers for increased airflow and breathability

ADDITIONAL INFORMATION

- SmartTouch system on index finger and thumb for easy control of smartphones, tablets or similar devices with touch screen functions
- Neoprene cuff for custom fit
- Lycra expansion slot
- Molded TPR closure for easy grip with stealth tonal logo
- Air mesh on back of hand for increased breathability

TECHNOLOGY

Wiley X premium protective eyewear use the world's most durable and lightweight materials: shatterproof Selenite™ polycarbonate lenses with scratch-resistant T-Shell™ hardcoat and virtually indestructible Triloid™ nylon frames.

Wiley X: the only premium eyewear brand whose entire line is ANSI and EN.166 safety tested.

ANSI HIGH VELOCITY IMPACT/V0 BALLISTIC TESTS

When tested, the spectacles and goggles, including their lenses, must withstand different kind of impact depending on the different test standards specifications:

HIGH VELOCITY AND BALLISTIC IMPACT	SPECTACLES	GOGGLES
ANSI Z87km/h	6,35 mm diameter steel ball fired at 165 km/h	6,35 mm diameter steel ball fired at 274 km/h
MIL-PRF-32432	0,15 caliber projectile fired at 702-724 km/h	0,22 caliber projectile fired at 604-614 km/h
MIL-PRF-32432A	0,15 caliber projectile fired at 786-796 km/h	0,22 caliber projectile fired at 636-647 km/h

ANSI HIGH MASS IMPACT TEST

Wiley X ANSI tested frames and lenses must withstand the weight of a 500 grams pointed projectile dropped from a height of 127 cm. This test pretty much ensures that they will stand up to anything you will encounter.

IMPACT SPEED & TEST ICON DESCRIPTION

EN.166S TESTED

Frame and lens must withstand the impact of a 22 mm steel ball weighing 43 grams dropped from 1.3 meters at a speed of 18 km/h. The lens must remain in the frame and should not be shattered. The frame must remain intact as well.

EN.166F TESTED

Frame and lens must withstand the impact of a 6 mm steel ball weighing 0.86 gram fired at 162 km/h. The lens must remain in the frame and should not be shattered. The frame must remain intact as well.

EN.166B TESTED

Frame and lens must withstand the impact of a 6 mm steel ball weighing 0.86 gram fired at 432 km/h. The lens must remain in the frame and should not be shattered. The frame must remain intact as well.

HIGH VELOCITY PROTECTION TESTED

Meets ANSI Z87.1 high velocity impact safety and optical standards.

BALLISTIC TESTED

Meets MIL-PRF-32432(GL) ballistic standards for spectacles and goggles.

BALLISTIC TESTED

Meets MIL-PRF-32432A ballistic standards for spectacles and goggles.

FEATURES & COATING ICON DESCRIPTION

FLOATING FACIAL CAVITY™ SEALS

Removable Floating Facial Cavity™ seals block out wind, debris, peripheral light and it floats if you were to drop it while on the water.

FILTER 8™ POLARIZATION

Our proprietary polarized lens technology adds 100% polarization to 100% ultraviolet protection for unequalled clarity and contrast.

HYDROPHOBIC COATING

Hydrophobic water repellent coating. Lets the water slide off instead of sticking to the lens. Only on polarized lenses.

FACIAL CAVITY™ SEALS

Our removable Facial Cavity™ Seals block out wind, debris and peripheral light.

PRESCRIPTION READY

Wiley X frames can be fit with a custom prescription lens.

OLEOPHOBIC COATING

Helps to keep dust, dirt and oil from sticking to the lens. Only on CAPTIVATE™ lenses.

HARD COATING

Scratch resistant coating protects against damage and extends the life of the lens.

ANTI-REFLECTIVE COATING

Anti-reflective coating eliminates distracting reflections of the lens surfaces. Only on polarized lenses.

ANTI-FOG COATING

Anti-fog coating prevents misting on the lens in high humidity and temperature differences

CLICK A.I.R. GASKET

The CLICK A.I.R. gasket allows air to flow through and effectively venting the eyewear, eliminating any fogging issues, and blocking out wind, debris, and peripheral light.

GET A TRUE COLOR EXPERIENCE

The human eye cannot see the entire light spectrum. Some areas are too difficult for the eye to see clearly, while others are too dangerous for the eyes' health. CAPTIVATE™ lenses filter out the harmful rays and light that confuses the eye, ultimately increasing visual clarity and definition with vibrant contrast and vivid details.

CAPTIVATE™ is a unique, patented lens technology that redefines a true, visual color experience by filtering out harmful UV-rays/blue Light (HEV) – It is a technology that is all about visualizing the light spectrum and giving you a true and unmanipulated color experience.

LIGHT SPECTRUM WITHOUT CAPTIVATE™

Our eyes can easily distinguish the blue, green, and red wavelengths along the visible light spectrum. However, it is where the blue, green, and red wavelengths merge that the eyes can have a difficult time seeing clearly.

LIGHT SPECTRUM WITH CAPTIVATE™

CAPTIVATE™ lenses filter out the confusing light in these merging areas and makes the light spectrum clearer for the eye.

WHAT MAKES CAPTIVATE™ UNIQUE?

Unique for the CAPTIVATE™ technology is the way in which light is filtered. Other brands' color enhancing technology boost and manipulate the colors that they let pass through their filter, which gives you a false color representation. This means that the colors you see are not necessarily the natural colors.

However, CAPTIVATE™ works differently. The filter sorts out the unwanted wavelengths, letting the wanted wavelengths through in their natural form. Ultimately, this secures you a visual experience with increased natural colors.

SCRATCH/ABRASION RESISTANCE

CAPTIVATE™ lenses achieve a Bayer 7 rating for scratch resistance.

WHAT IS THE BAYER ABRASION TEST?*

The Bayer test is one of the most cited test methods for abrasion resistance. This test subjects both a coated and an uncoated lens to abrasion from oscillating "sand". The tray is reciprocated in a back-and-forth motion at a distance of 10 cm (4 inches) at 150 cycles per minute for 4 minutes.

After this, the haze is measured on both lenses. The ratio of haze gain of the uncoated lens to the coated lens is the Bayer Ratio. A Bayer Ratio of "1" means that the coating has equivalent abrasion resistance to an uncoated lens. A Bayer Ratio of "7" means that the uncoated standard lens has seven times the haze gain as the coated lens. A Bayer Ratio of "4" or higher is a premium coating.

*November 2011, Testing Scratch Resistant and AR Lenses

OLEOPHOBIC COATING

All CAPTIVATE™ lenses are treated with our proprietary oleophobic coating, which gives the lenses a smoother surface that keep dust, dirt, oil, snow, and water from sticking to the lenses. This helps in preventing smudge and water spots, making the lenses easier to clear.

BENEFITS OF CAPTIVATE™

ENHANCED COLORS AND CONTRAST

CAPTIVATE™ filters out the confusing light where blue merges with green (500nm) and green merges with red (585nm). This allows for more light where it is easier for your eyes to see, resulting in vivid contrasts, and enhanced blue, green, and red colors.

GREATER CLARITY AND BETTER DEPTH PERCEPTION

Blue light (HEV) with shorter wavelengths and higher frequencies scatter light and create haze. By filtering out these harmful rays, CAPTIVATE™ removes this haze and allows distant objects to be seen more clearly, while also increasing your depth perception.

BLOCKS UV AND BAD BLUE LIGHT

CAPTIVATE™ blocks UV/blue rays that are harmful for your eyes. Blue light is not only an issue from screens. Outside, we are exposed to more than 30 times the amount as 1 hour in front of a screen inside. With CAPTIVATE™ all bad blue light up to 430 nm is blocked.

POLARIZED LENS OPTION

CAPTIVATE™ POLARIZED GREEN MIRROR LENS

LENS BASE COLOR: COPPER

LIGHT TRANSMISSION: 12%*

Get high-performance on cloudy days! The lenses eliminate glare from reflective surfaces, and will make green, orange, and blue colors appear more vivid.

CAPTIVATE™ POLARIZED COPPER LENS

LENS BASE COLOR: COPPER

LIGHT TRANSMISSION: 17%*

Get bright colors! The lenses will reduce blue light, ensuring more saturation of red and green colors, while also removing glare and intensifying yellow shades.

CAPTIVATE™ POLARIZED ROSE GOLD MIRROR LENS

LENS BASE COLOR: GREEN

LIGHT TRANSMISSION: 13%*

Get high-performance on overcast days! The lenses eliminate glare from reflective surfaces and reduce orange and blue, making green and yellow shades look more vivid.

CAPTIVATE™ POLARIZED BRONZE MIRROR LENS

LENS BASE COLOR: COPPER

LIGHT TRANSMISSION: 15%*

Get high-performance on overcast days! The lenses eliminate glare from reflective surfaces and reduce orange and blue, making green and yellow shades look more vivid.

CAPTIVATE™ POLARIZED GREY LENS

LENS BASE COLOR: GREY

LIGHT TRANSMISSION: 15%*

Get vivid colors and contrast! These lenses will keep most colors neutral but enhance all that is green, as well as reduce all glare from reflective surfaces.

CAPTIVATE™ POLARIZED BLUE MIRROR LENS

LENS BASE COLOR: GREY

LIGHT TRANSMISSION: 11%*

Let colors enter your eyes uniformly! These lenses eliminate any glare and equalize the visible light spectrum to keep most colors neutral, while enhancing greens.

POLARIZED LENS OPTIONS

POLARIZED PLATINUM FLASH LENS

LENS BASE COLOR: AMBER

LIGHT TRANSMISSION: 13%*

On top of green lenses, a multi-coat Z-Oxide mirror is placed, providing maximum glare reduction without distorting the colors. 100% UVA/UVB protective.

POLARIZED BLUE MIRROR LENS

LENS BASE COLOR: GREEN

LIGHT TRANSMISSION: 11%*

The lenses provide a better vision and allow the eyes to feel more comfortable and well rested. The multi-coated green lenses absorb reflections across mirror surfaces and diminish glare. 100% UVA/UVB protective.

POLARIZED GREY LENS

LENS BASE COLOR: GREY

LIGHT TRANSMISSION: 15%*

The lenses reduce glare and offer the greatest clarity. They block blinding glare, while preserving sharpness. 100% UVA/UVB protective.

Light transmission is the light which reaches the eye after the lens has discarded / absorbed some of the light.

*The light transmission varies +/- 3%, depending on the model.

STANDARD LENS OPTIONS

CLEAR LENS

100% UVA/UVB PROTECTIVE
LIGHT TRANSMISSION: 89%*

With the lens you get maximum light transmission, making you see the precise color values. Ideal for hazy or overcast weather, as well as dusk/dawn conditions and indoor use.

BROWN GRADIENT LENS

100% UVA/UVB PROTECTIVE
LIGHT TRANSMISSION: 22%*

Ideal for everyday use as well as most outdoor activities. It provides a shield for overhead light, while allowing greater visibility at the bottom of the lens.

SILVER FLASH LENS

100% UVA/UVB PROTECTIVE
LIGHT TRANSMISSION: 12%*

The grey lens is covered with a multi-coated Z-Oxide mirror, which reduces glare and makes them excellent on bright days. It absorbs all colors equally, making it preserve the same color perception as without sunglasses.

VERMILION LENS

100% UVA/UVB PROTECTIVE
LIGHT TRANSMISSION: 45%*

Performs best in medium to low light conditions. It increases contrast, as it blocks blue light (HEV), as well as it sharpens contrast and brightens targets.

LIGHT RUST LENS

100% UVA/UVB PROTECTIVE
LIGHT TRANSMISSION: 52%*

It filters out most blue light waves (HEV), which is the key component of glare and haze. It enhances contrast in medium to low light conditions.

PURPLE LENS

100% UVA/UVB PROTECTIVE
LIGHT TRANSMISSION: 40%*

It is best for use in medium to low-light conditions. The lens sharpens contrast and brightens targets, as the green color is dampened to the max.

GREY LENS

100% UVA/UVB PROTECTIVE
LIGHT TRANSMISSION: 15%*

Absorbs all colors equally, making it preserve the same color perception as without sunglasses. It is perfect in bright light conditions, ensuring maximum glare reduction.

BROWN LENS

100% UVA/UVB PROTECTIVE
LIGHT TRANSMISSION: 16%*

It ensures a superior visual definition. It increases contrast and enhances ground level contours in most light conditions.

COPPER LENS

100% UVA/UVB PROTECTIVE
LIGHT TRANSMISSION: 14%*

Enhances contrast and ensures you superior visual definition in bright sun conditions.

YELLOW LENS

100% UVA/UVB PROTECTIVE
LIGHT TRANSMISSION: SABER 86% / DETECTION 82%*

The best light enhancing lens tint. It filters out the blue light (HEV), which may cause glare, and it enhances contrast in low-light, foggy, or overcast conditions.

ORANGE LENS

100% UVA/UVB PROTECTIVE
LIGHT TRANSMISSION: 55%*

It sharpens contrasts and dampens green colors, making it perfect on the range or out hunting. With this lens, your optimal vision is ensured, when used in medium to low-light conditions.

WILEY X PRESCRIPTION INSERT

Most of our eyewear can be made with prescription lenses that are installed directly into the frame. However, some models cannot. In this case, you can have prescription lenses fitted into a removable prescription insert that is mounted on the nose piece. The ability to install the insert on multiple models with the same nose piece is a great advantage. The eyewear is still tested as safety eyewear, just like all our other eyewear.

The PTX prescription insert can be used for:
Saber Advanced, WX Rogue Comm, and Nerve

for:

The TLRX prescription insert can be used for:
WX Vapor 2.5, WX Vapor Comm 2.5, Spear
and Spear Dual

POLARIZED LENSES

Polarization is all about reflection and glare of horizontal surfaces like asphalt, the windshield, and especially water.

So, when sunlight reflects off a surface it becomes very concentrated and intense – this is known as glare. A good example is looking into a lake. The sun rays hit the horizontal surface and bounce back causing glare, which means you cannot look through the water.

So, what does a polarized lens do?

- A polarized lens is a lens covered with a polarized filter. This filter absorbs horizontal light. In this way, the lens only allows vertical light to enter. The result is that this reflected and intense glare is blocked from the user's vision.
- Unique for the Wiley X polarized lenses are that we test them to meet the EN.172, which is the optical safety standard for sunglare filters. This also means that the plane of polarization in our lenses do not deviate from the vertical or nominal direction with more than +/- 3%.

THE SECRET BEHIND

The picture is showing a Saber Advanced lens, which has been shot from only 10 meters distance using a 12 gauge shotgun with Modified Choke and shooting with steel shot size #7. As the picture shows, the lens was hit by multiple pellets – no cracks or penetration on the back of the lens leaving the eyes intact and protected.

360° NOSE PIECE

A wire core makes this nose piece fully adjustable. Specially developed rubber on top of the wire core guarantees a superior grip during almost any activity. The rubber is also very robust and so comfortable that the glasses can be worn all day without any discomfort.

- Prepared to hold the Wiley X PTX prescription insert
- Adjustable to all nose shapes and sizes
- Specially developed rubber coating for superior grip and high comfort

COMM TEMPLE SYSTEM

Our COMM TEMPLES are thin enough to fit under shooting earmuffs, and other ear mounted communication devices providing a comfortable fit. Almost unnoticeable, these slim temples prevent irritation that you may experience with other eyewear. Available on selected models.

REGULAR TEMPLES

COMM TEMPLES

DUAL GOGGLE LENS

The DUAL Lens technology used in the Wiley X goggles secures a free view in all extreme weather and temperature conditions. Typically with standard goggles the outside area is usually warmer, causing the lens to fog. With the Wiley X DUAL Lens technology, the integrated thermal bridge between the two lens layers separates cold and warm air, preventing temperature differences that would result in fogging.

WX DUAL TECHNOLOGY

Two layer lens

CAMO & OUTDOOR PATTERNS

Kryptek® patterns were forged and inspired in combat, created from battlefield necessities, and then incorporated into outdoor adventure gear and apparel. Kryptek® products are continuously tested and proven in austere combat environments and extreme hunting conditions to provide products to outdoor adventurers who demand the utmost quality and performance in their gear.

KRYPTeK® NEPTUNE™

This pattern was designed specifically for fishing camouflage and created to imitate the visual features of the underwater depths. The nautically inspired design has a 3-dimensional effect that makes it the perfect match for any angler.

Available on the WX models WX OMEGA and WX GRAVITY

FACIAL CAVITY™ SEALS

Fine dust and pollen, as well as wind, can cause long-term eye irritation such as Dry Eye Syndrome. Peripheral light can also diminish optical clarity. Wiley X removable soft foam Facial Cavity™ Seals combined with Top Down™ Ventilation System block out even the finest irritants and peripheral light, protecting the eyes and allowing all lenses to perform at peak levels. Facial Cavity™ Seals are available on selected styles.

DRY EYE SYNDROME

Dry eyes are a result of decreased tear production or change in the tear film's consistency resulting in tears evaporating quicker. In both cases, the tear film is reduced and does not cover the entire surface of the eye, which can cause irritation and itchiness.

Protecting your eyes while participating in activities that expose you to wind, dust and other debris is crucial in preventing dry eyes that can result in Dry Eye Syndrome. The Wiley X Facial Cavity™ Seal and the base curve of all Wiley X frames help minimize the airflow around the eye, allowing the user to focus on the challenge at hand.

FLOATING FACIAL CAVITY™ SEALS

Comfortable, removable, and durable Floating Facial Cavity™ Seals easily clip into Wiley X's innovative Climate Control series eyewear. This unique performance technology prevents your glasses from sinking as well as shields your eyes from harmful and disturbing outside elements like wind, peripheral light, dust, and debris. Floating Facial Cavity™ Seals are available on selected styles.

CLICK A.I.R. GASKET SYSTEM

With the Click A.I.R. gasket technology, Wiley X offers new possibilities and advantages. Like our regular foam gaskets, the CLICK A.I.R. gasket is designed to protect the eyes from irritants like dust and wind, by creating an effective foam barrier. However, with this design's enhancements, the barrier can be unsealed to allow airflow. By a click of a button, the CLICK A.I.R. gasket (A.I.R. = Air Intake Regulation) is opened, allowing air to flow through the gasket and effectively venting the glasses and eliminating any fogging issues. Click open the ventilation or close for an airtight seal – the choice is yours.

WILEYX.COM/CLICKAIR

GEAR & ACCESSORIES

Our range of apparel and accessories is full of cool cases, headgear, T-shirts, patches, straps, and bottles that will help you look great and enhance your overall Wiley X experience.

DIGITAL PRESCRIPTION LENS CUTTING

To ensure that we can deliver premium protective prescription eyewear, we've teamed up with high base curve prescription lens experts and manufacturer, Shamir.

Our partnership with Shamir ensures that the majority of all Wiley X models can be fitted with customized prescription lenses. Shamir's digital prescription lens cutting techniques allow us to provide our customers with a wide range of prescription levels.

PRESCRIPTION LENSES

The majority of all the Wiley X frames can be fitted with prescription lenses. As our professional prescription lens partner, we have chosen Shamir, whose Attitude™ lenses are specifically developed for our 8-base curve frames. The result is individually customized lenses that offer crystal clear vision in any given situation, while providing the same crucial protection as the non-prescription lenses developed by Wiley X.

The prescription program enables simple ordering and delivery of single vision and progressive corrective lenses through your nearest optician.

POLYCARBONATE LENSES

To meet the stringent worldwide safety eyewear standards, Wiley X uses the lens material called polycarbonate. The flexibility and strength of polycarbonate enables it to stop the impact from a 12 gauge shotgun or fragments from an IED (Improvised Explosive Device). Wiley X applies anti-scratch coatings on all lenses to increase the lifetime and maintain a top of the line product.

PERFORMANCE MARKINGS

All Wiley X styles are ANSI rated and EN.166 tested protective eyewear. We test and mark all of our frames and lenses with the appropriate ANSI and EN.166 markings.

EN.166 STANDARD MARKINGS

EN.166(S) – Spectacles with increased robustness tests
EN.166(F) – Spectacles with low energy impact tests
EN.166(B) – Goggles with medium energy impact tests

ANSI STANDARDS

WX Z87-1 – The frame and temples or goggle frame passes the ANSI high velocity and high impact standards.

WX Z87-2 – The frame and temples or goggle frame passes the ANSI high velocity and high impact standards, and it can be fitted with prescription lenses.

ANSI STANDARD MARKINGS

- | | |
|-----|---|
| WX | Precedes all ANSI rating marks. Wiley X is the manufacturer. |
| Z87 | The frame and temples or goggle frame passes the ANSI high velocity and high impact test. |
| -2 | The frame can be fitted with a prescription lens, which is the case with almost all Wiley X glasses. |
| + | The frame and temples or goggle frame passes the ANSI high velocity and high impact test (2010 standard). |
| + | The lens meets or exceeds the ANSI High Velocity Impact standard. |
| S | The lens is a filter or shaded lens (not clear). |
| V | The lens is variable-tint photochromic (light adjusting). |

POLYCARBONATE PRESCRIPTION INFORMATION

SHAMIR

Wiley X sports glasses can be fitted with customized prescription lenses, so you can enjoy your favorite activities and extreme sports without impaired vision.

Wiley X mostly use Shamir polycarbonate lenses for prescription jobs, due to Shamir's unique safety lens collection developed for wraparound sports frames. This optical design compensates for the high base curve of the lens, which minimizes side distortion on both single vision and progressive lenses. Furthermore, you get the same safety standards as the Wiley X non-prescription eyewear.

The Shamir lenses are available in many colors and with different features like transition (light adjusting) and polarization. A number of special coatings and mirrors can be added, but the lenses always come with improved scratch-resistant coating. The majority of all Wiley X frames can be fitted with prescription lenses – ask your local optician for further information or go to www.wileyx.eu and explore the vast possibilities.
